AYANDA JOSEPH

AI & SOFTWARE ENGINEER | END-TO-END PRODUCTS, TRAINING & EVALUATION

Nigeria | ayandajoseph390@gmail.com | josephmayo.site
github.com/josepha-mayo | huggingface.co/josephmayo

18-year-old AI engineer with 3 years of hands-on software engineering experience; available for full-time work. Build end-to-end AI systems: curate data, train and fine-tune models, benchmark checkpoints, package inference, and ship full-stack products. Combine Python/PyTorch model work with TypeScript/React interfaces, backend APIs and PostgreSQL.

TRAINING, EVALUATION & AGENT-ASSISTED ENGINEERING

RSI workflow (human-supervised): Use a frozen copy of the base model as a researcher to analyse failures and propose training-data, policy and training-code changes for a trainable copy. Supervise fine-tuning and RL experiments on cloud GPUs, compare candidate checkpoints against baseline evaluations, and publish selected improvements on Hugging Face.

Multi-agent execution: Coordinate parallel autonomous research, coding, testing and review agents to accelerate experiments and product delivery. Ground acceptance in executable tests, benchmark comparisons and direct inspection, rather than agent completion claims.

SELECTED AI & FULL-STACK PRODUCTS

PEX | Coding-agent supervision

Built a Python/TypeScript supervisor with persistent goals, evidence-backed completion gates and independent test verification. In a documented live OpenCode run, caught a false test-pass claim and guided recovery to verified passing tests.

Socbench | Dataset quality & evaluation platform

Built a Next.js/FastAPI product with a seven-stage audit pipeline: 55 catalogued datasets, 53 complete automated assessments and 16 validated proxy-training outcomes, retaining six divergent runs as evidence.

gitPulse | Developer social feed

Built a GitHub-connected social and release platform using Next.js, TypeScript, PostgreSQL and OAuth, with profiles, discovery feeds, live updates and API-based posting.

ring-sandbox | Published Python SDK & API emulator

Shipped a typed API client and FastAPI emulator with HMAC-verified webhooks, replayable device scenarios, pytest fixtures and CI-backed integration tests.

PUBLISHED HUGGING FACE MODELS | MEASURED OUTCOMES

Holo-3.1-9B-Coder | Coding-model post-training

Reported HumanEval+ pass@1: **52.4% to 65.2% (+12.8 points)**; LiveCodeBench v2: **31.5% to 37.8%**. Released LoRA adapter, merged weights and three GGUF quantizations.

VON-3B | Efficient coding & structured tool use

Combined SFT, RL and policy distillation. Matched EvalPlus HumanEval+: **134/164 to 145/164**; structured tool-call probe: **0/32 to 32/32**. Packaged Q8 GGUF for offline inference.

Gemma 4 E4B IT Coder | Multimodal coding fine-tune

Fine-tuned on 1,024 filtered examples; executable pass count improved from **34/50 to 42/50** on a documented HumanEval subset. Released merged weights and GGUF.

TECHNICAL SKILLS

ML: PyTorch, Transformers, PEFT, LoRA/QLoRA, SFT, RL experiments, DPO/ORPO, distillation, EvalPlus/HumanEval, LiveCodeBench, dataset auditing, contamination controls, GGUF, llama.cpp.

Software: Python, TypeScript, React/Next.js, Node.js, FastAPI, SQL/PostgreSQL, REST APIs, OAuth, live updates, pytest, Docker, Linux, GitHub Actions. **Agent workflows:** MCP, OpenCode, Codex, Claude.
